## Preservation as Part of a Bridge Management System (BMS)

Dave Juntunen

Michigan DOT Bridge Development Engineer

October 3, 2016 Midwest Bridge Preservation Partnership

Milwaukee, Wisconsin

# BMS Questions

- What is considered a Good Bridge Management System?
  - How much money do you need to spend on Preservation?
  - How do you prioritize your projects?
  - Is your strategy effective?

# AASHTO Manual for Bridge Evaluation

## ■ Update Chapter 3 – Bridge Management Systems

3-i

### SECTION 3: BRIDGE MANAGEMENT SYSTEMS TABLE OF CONTENTS

# Objectives of a BMS

- Meet strategic objectives by connecting inventory management and project selection to agency strategic goals through a data driven process.
- Meet the needs of both upper management, where it is a strategic planning tool, and technical decision makers, where it is an engineering tool.
- It strives to find the optimum use of funding by enabling decision-makers to understand the essential trade-offs

# National Goals and Performance Measures

## MAP-21 (Moving Ahead for Progress in the 21st Century)

- ***No more than 10% of the total bridge deck area in a State on the National Highway System can be classified as structurally deficient for a period of 3 years without a penalty being imposed. Title 23, U.S.C. §1119(f)(2)(A)***
- **A State shall develop a risk-based asset management plan for the National Highway System to improve or preserve the condition of the assets and the performance of the system.**
- ***States must maintain the highway infrastructure asset system in a state of good repair. Title 23, U.S.C. §1119(b)(2)***

# Ultimate Goal – Maintain Bridges in a “State of Good Repair”

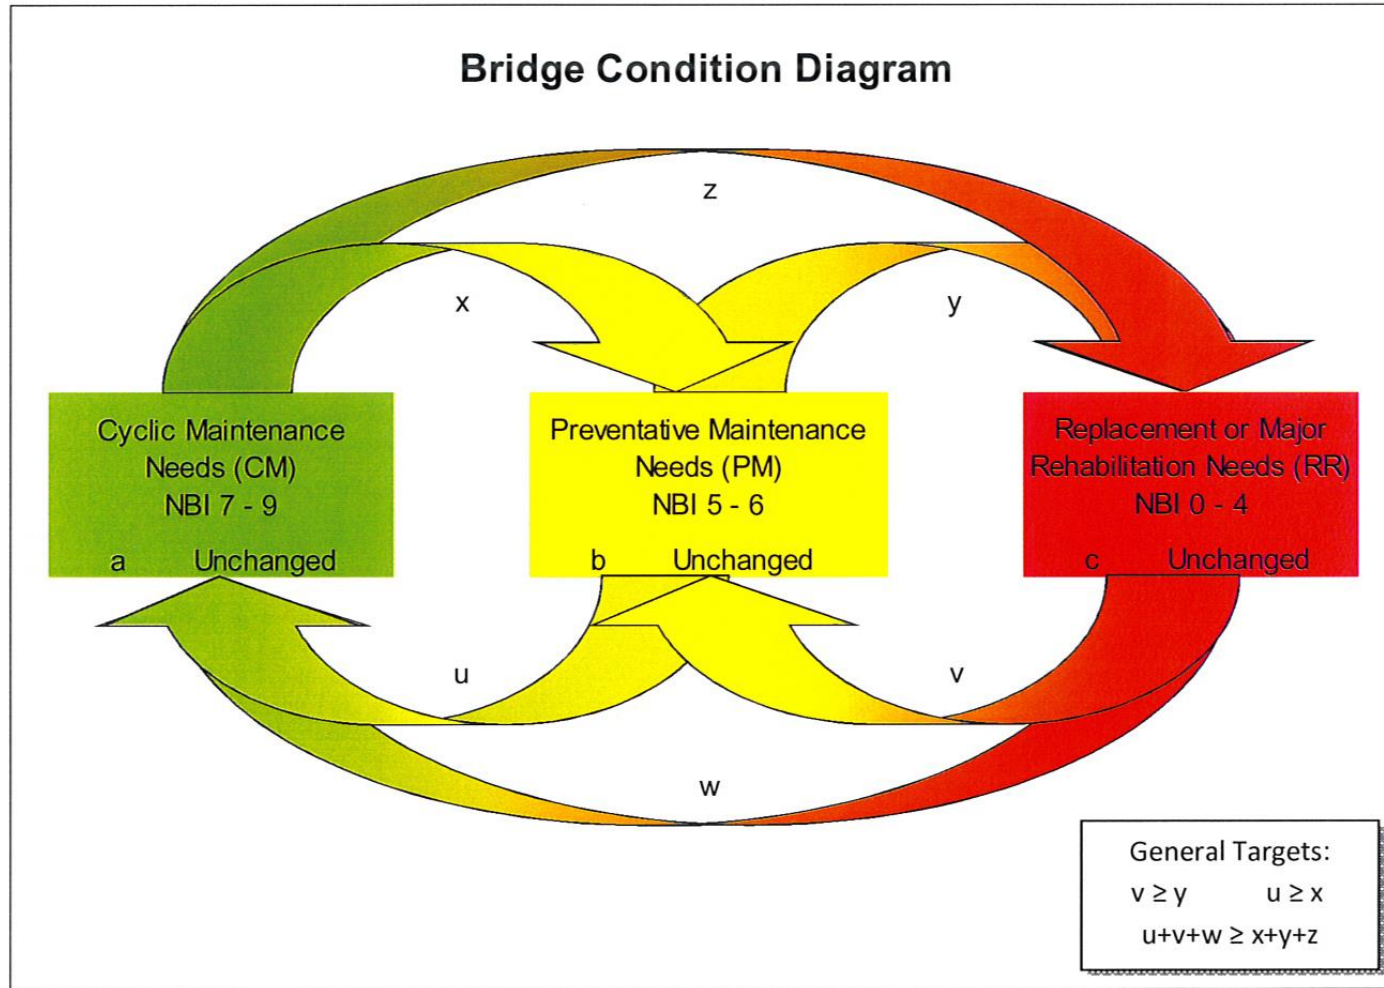

Definition – State of Good Repair<sup>1</sup>: The existing physical conditions of bridge elements, components or entire bridges are such that the bridges (a) are functioning as designed and (b) are sustained through regular maintenance, preservation, and replacement programs.

1 – FHWA Bridge Preservation Guide

Talking  
about today

# Objectives for Michigan DOT Bridge Management

- Deteriorate the network five years
- For every bridge not programmed
  - Tell what the bridge's needs are
  - Provide and estimate of cost for the work
  
  - What category of work does the bridge fall in
    - Preservation
    - Rehabilitation
    - Replacement

# Agency Rules

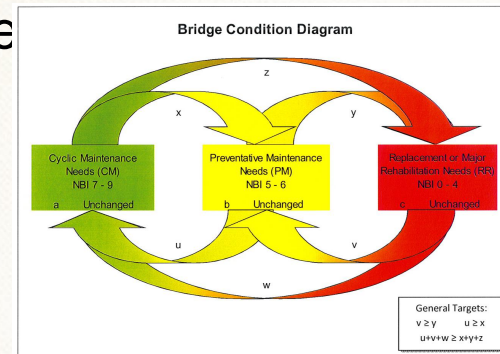

- The intent of the rules is to translate agency practices and their effects on bridge, program, and network level recommendations into the system's modeling approach.

- **Cyclic Rules**

- Action and Interval
- Example - "Wash steel beam bridges once each year."

- **Conditional Rules**

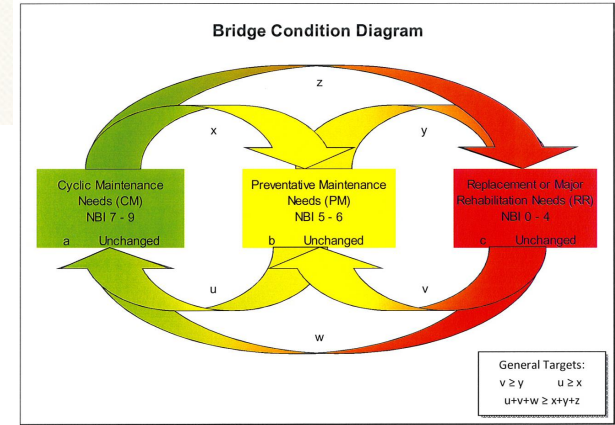

- Action taken as the result of the condition of and element or component
- Example - Replace seals in strip seal expansion joints when quantity in Condition State 2 (fair) exceeds 20%, or quantity in Condition State 3 is greater than 0%
- Conditional rules most often need to be considered concurrently with related elements that could impact how the rules should be applied.

# Imagine This Bridge

## 2C 402 – West Temple Off-ramp Over 2<sup>nd</sup> West

Deck NBI	Super NBI	Sub NBI
7 - Good	6 - Satisfactory	4 - Poor

## 2015 Element Inspection

# Different Analysis Approach / Decision Support

## ■ Bottom Up

- Inspector Driven Based on current data (work candidates)

Bridge: IC 700 Facility Carried (007) RP210NB TO 80WB Inspection: 2015-03-29 (MRFU) Type: Regular NBIS

Inspection > Work > Work Candidates

Candidate ID	Action	Date Recommended	Target Year	Estimated Cost	Status	Work Assignment	Priority	Structure Unit	Date Completed	Description	Source

**Type of Work**

Candidate ID: IC 700-FTXK-121514-72C8D896C2  
Structure Unit: 2 / Type = F  
Action Type: None  
Action: Column Repair  
Date Recommended: 12/9/2014  
Priority: Medium - 1 to 3 Years  
Date Completed: [ ]  
Target Year: 2014  
Assignment: No  
Work Assignment: LSCOT Structures  
Status: Planned  
Source: Planning Division

**Work Estimates**

Estimated Quantity: [ ]  
Cost per unit: [ ]  
Calculate  
Estimated Cost (\$): [ ]

Generated by user "jude jar" on 12/15/2014  
Single column best fit has 108 x 118 deterioration with rebar exposed at bottom

# Different Analysis Approach / Decision Support

## ■ **Top Down**

- Deteriorate the entire network over your programming time frame, and try to balance the best option for each bridge with the best option for your whole network, increasing or decreasing work on any one bridge in order to make the most progress toward your performance measures.

# How to we Prioritize Preservation?

Programs > Program Planning

Rehab Culvert

**Assigned Projects**

# Different Analysis Approach / Decision Support

## ■ Middle Out

- Deteriorate Inspection data and evaluate multiple possible work activities (possibly including inspector recommendations) over your programming time frame to give you the best option for your bridge at a detailed level

# Life Cycle Analysis

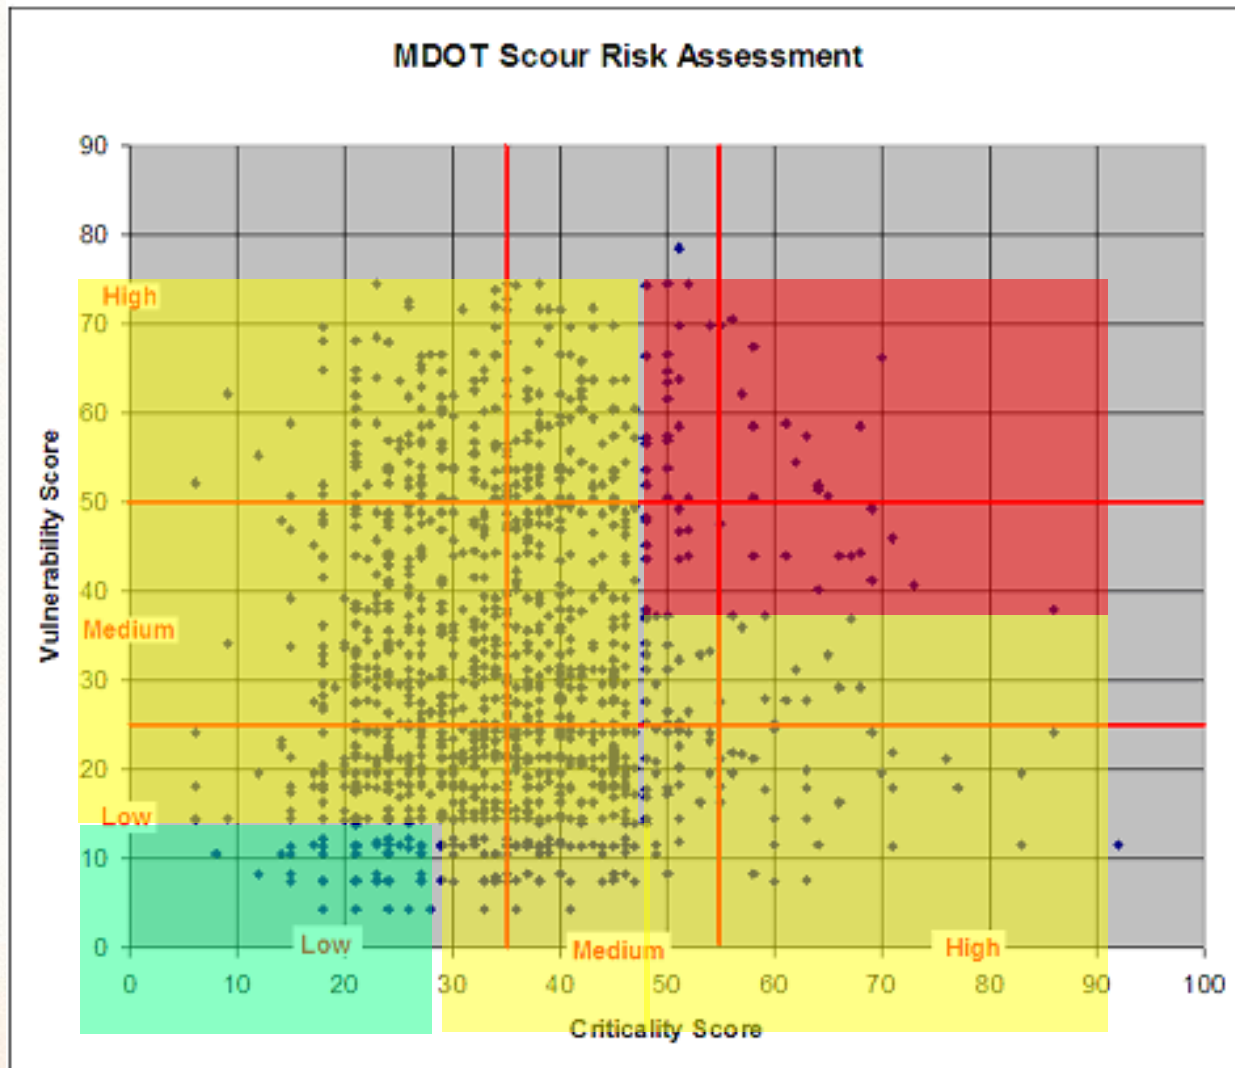

- Compare fixes to a bridge
- When to do the work

## Policy Rules

Name	Condition	Action	Up	Down	Top	Bottom
Preserve Deck	((Health Index of Category 'Decks/Slabs' Must Be Greater Than Or Equal To Number Value 50 AND Health Index of Category 'Decks/Slabs' Must Be Less Than Or Equal To Number Value 90) AND (Health Index of Element '510 - Wearing Surfaces' Must Be Less Than Or Equal To Number Value 30))	Preserve Deck - Network		↓		↓ ✕ ✎
Rehab Deck	(Repeat every 15 or more years AND Health Index of Category 'Decks/Slabs' Must Be Less Than Or Equal To Number Value 70 AND Health Index of Category 'Decks/Slabs' Must Be Greater Than Or Equal To Number Value 50)	Rehab Deck - Network	↑	↓	↑	↓ ✕ ✎
Deck Replace	(Health Index of Category 'Decks/Slabs' Must Be Less Than Number Value 50 AND Health Index of Category 'Superstructure' Must Be Greater Than Number Value 60 AND Health Index of Category 'Substructure' Must Be Greater Than Number Value 60)	Replace Deck - Network	↑	↓	↑	↓ ✕ ✎
Apply Wearing Surface	((Health Index of Category 'Decks/Slabs' Must Be Greater Than Or Equal To Number Value 50 AND Health Index of Category 'Decks/Slabs' Must Be Less Than Or Equal To Number Value 100) AND (Field '510 - Wearing Surfaces' Is Null))	Place Wearing Surface - Network	↑		↑	✕ ✎

Add Rule

# Program Level Risk Assessment

# Multi-Objective Optimization

- Ability to compare many competing objectives
  - Preservation
  - Safety
    - Examples, seismic, scour, ...
  - Modernization
  - Needs of the road program
  - .....

# Decision Support

Bridges cannot be managed without the practical, experienced, and knowledgeable input of the Engineer/Manager. A BMS is never used in practice to find one best policy among the possible choices. Instead, Managers should use the BMS as a tool to evaluate various policy initiatives, often referred to as “what if” analysis. The available choices may relate to network-level decisions or project-level decisions.

# Your BMS Tool Needs to be Flexible and Responsive

Analysis > LCCA

Index	Date	Year	Action Name	Orig. Cost	NPV Cost	Prior Action H.I.	After Action H.I.
1	2020	5	Column Repair, Profile Rotomilling	\$2,580,595	\$2,205,903	95.49	98.92
