

Timber Substructure Repairs

Travis Kinney, Oregon DOT

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Overview

- Background on timber substructure inventory.
- Timber Pile Repairs
- Timber Cap Repairs

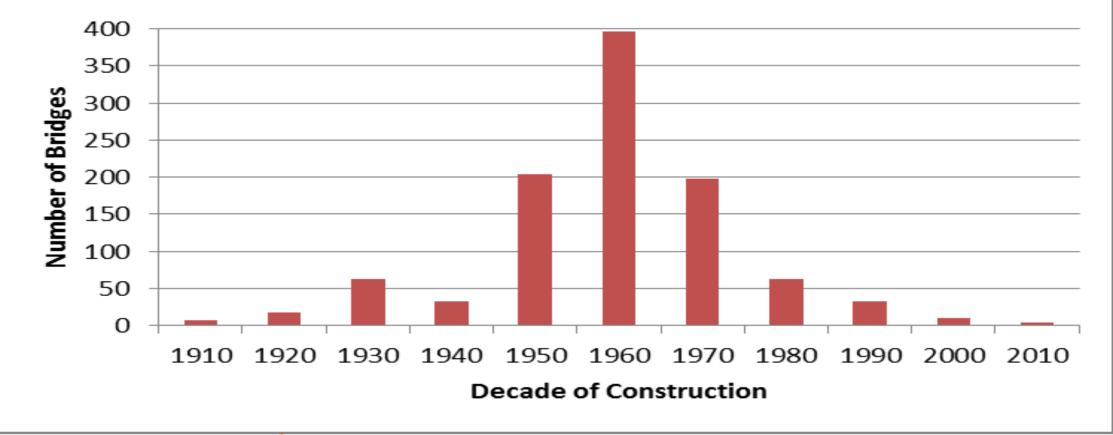

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

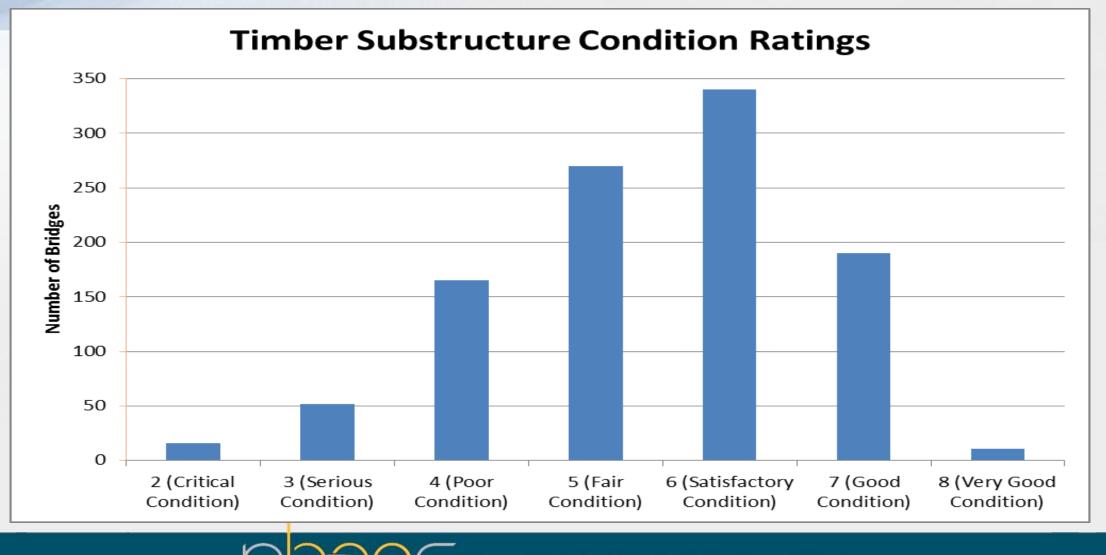

547 BRIDGES ARE MORE THAN 50 YEARS OLD!

Timber Substructures by Decade

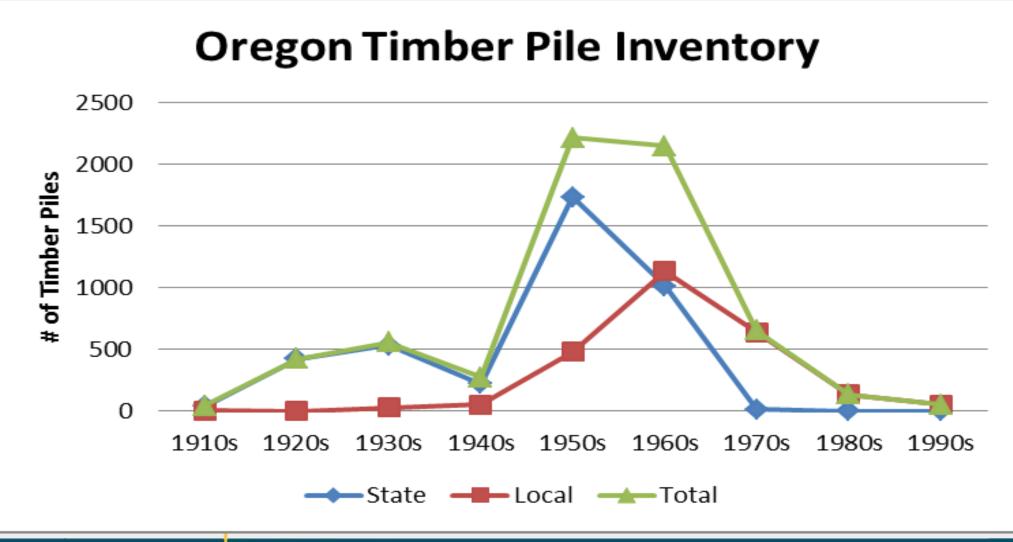

233 Bridges with SD Substructures

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

5,600 PILES ARE MORE THAN 50 YEARS OLD!

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

South Yamhill Bridge:

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

South Yamhill Bridge

- Built in 1951.
- Located in Willamette Valley.
- Reinforced Concrete Deck Girder on Timber Pile Trestles.
- 990 ft. in length.
- 34 Timber Bents.
- 204 timber piles (As constructed).
- Estimated cost of replacement = \$35 Million.

Replacing bridges 1-piece at a time

- 85 of the original 204 timber piles have been repaired.
- 16 of the Original 34 Timber caps have been replaced.

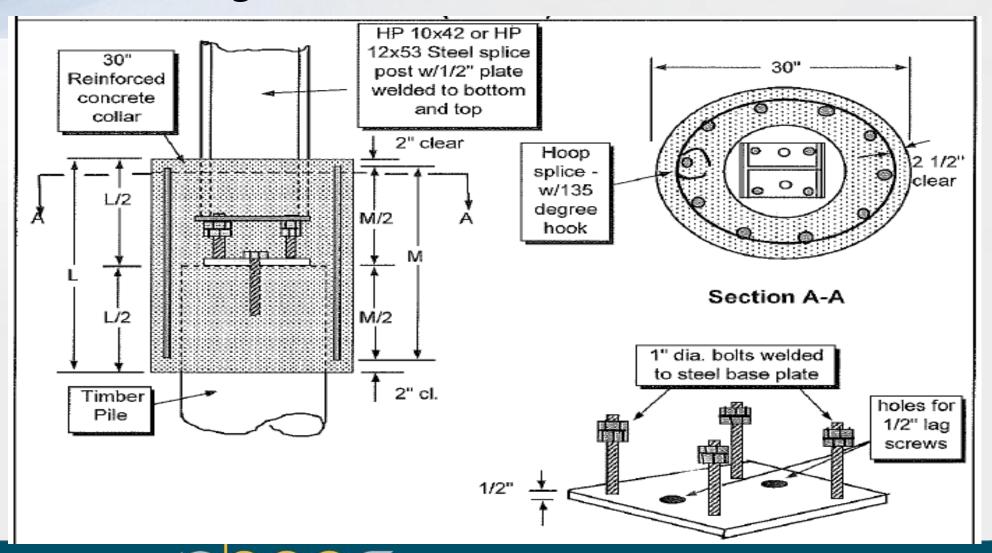

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Timber Pile Repair Options:

- Drive new piles.
- Install a spread footing
- FRP Wrap and Epoxy Injection
- Encapsulation
- Posting

Previous Posting Detail:

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

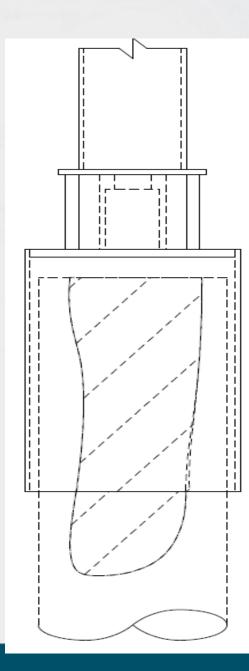

Drawbacks

- Difficult to install in tight spaces (abutments)
- Steel cage difficult to stage.

New Pile Repair Method

- Limits excavation depths by reducing splice length and allowing splices at locations with 2" shells.
- Replaces reinforced concrete splice with steel casing.
- Preloading done by hydraulic jack for pile dead load control.
- Design was destructively tested by OSU.

Step 1: Install shoring as required by jacking plan

Step 2: Excavate 2' below Ground Line

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Step 3: Cut out section of rotted pile

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

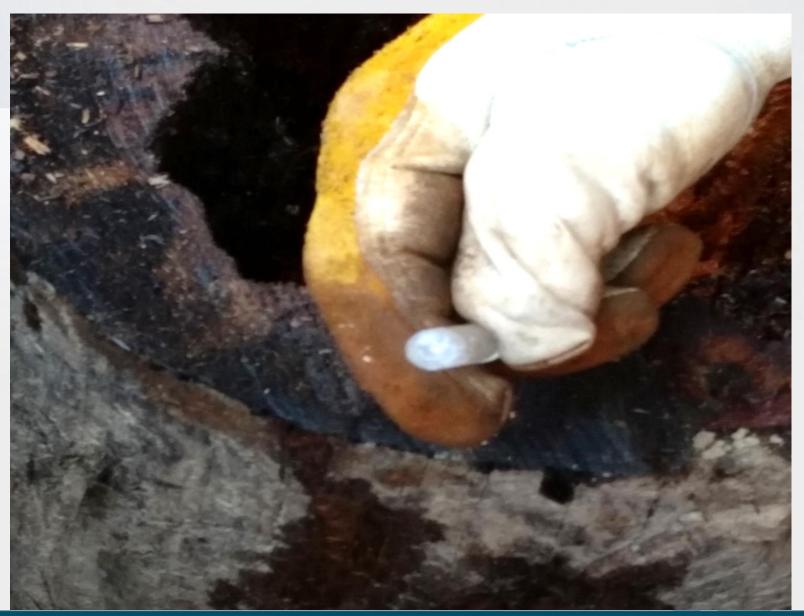

Step 4: Remove remaining rotten core

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Step 5: Install borate rods or other preservative

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Step 6: Fill cavity with high early strength concrete.

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

2000

Step 7: Weld cover plate in place

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Step 8: Use vent holes to finish pour

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Step 9: Position Steel Pile.

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Step 10: Preload with 20 ton hydraulic jack

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Step 11: Cut shims to fit and weld in place

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

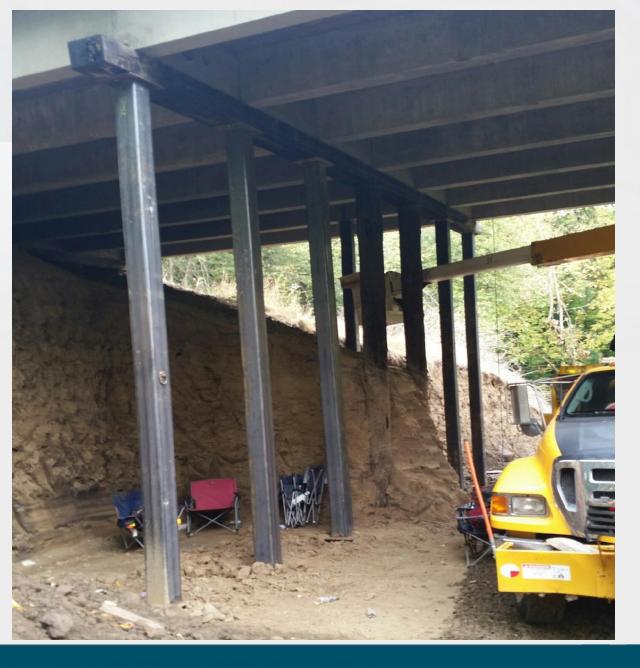

Completed Splice

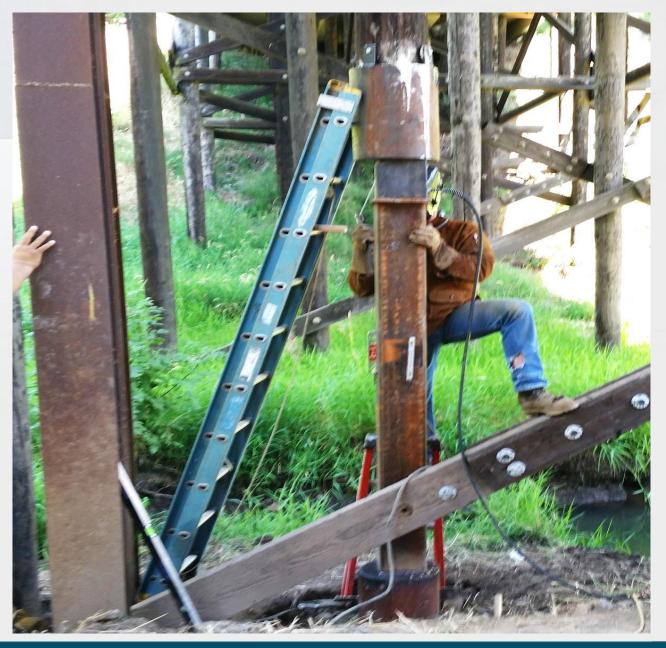

Step 12: Back fill to existing ground level

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Modifications: "Dumbbell Repair"

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Modifications: "Square post"

How much rot is too much to repair?

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Timber Pile Splice Testing

- ODOT contracted with Oregon State University to destructively test pile splice detail.
- 6 piles in total were tested; 3 flexure and 3 compression.
- Rot was simulated to varying depths:
 - 2 feet
 - 3 feet
 - 4 feet

Compression Test Setup

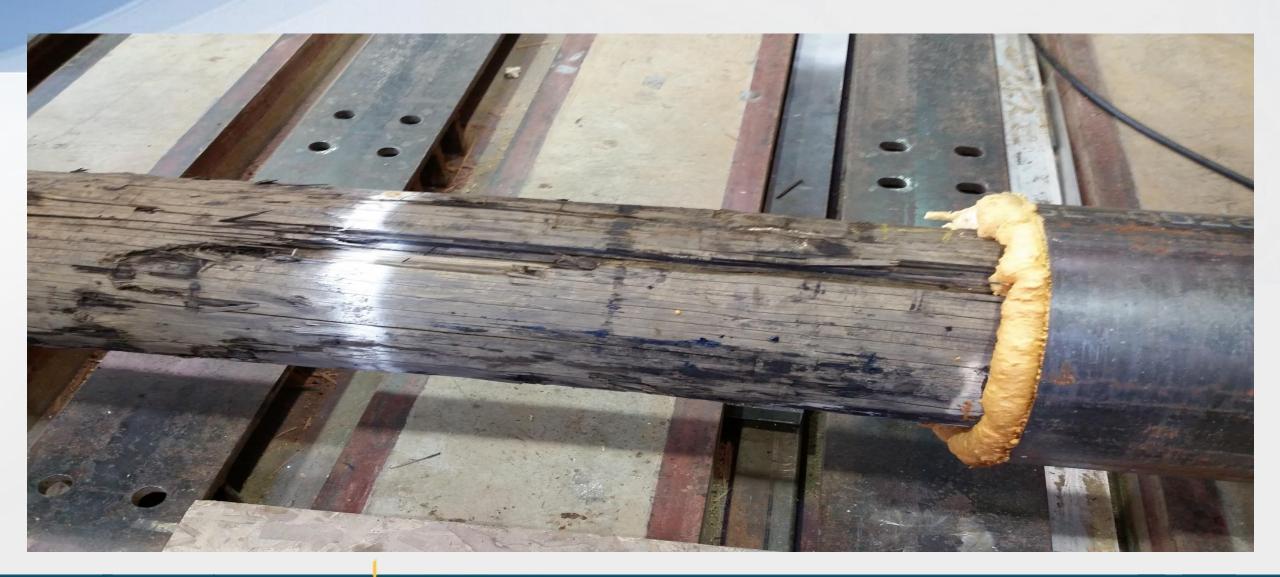

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Compression Test Results:

- The jack wasn't big enough!
- No piles failed at maximum load of 300,000 lbs.

IATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

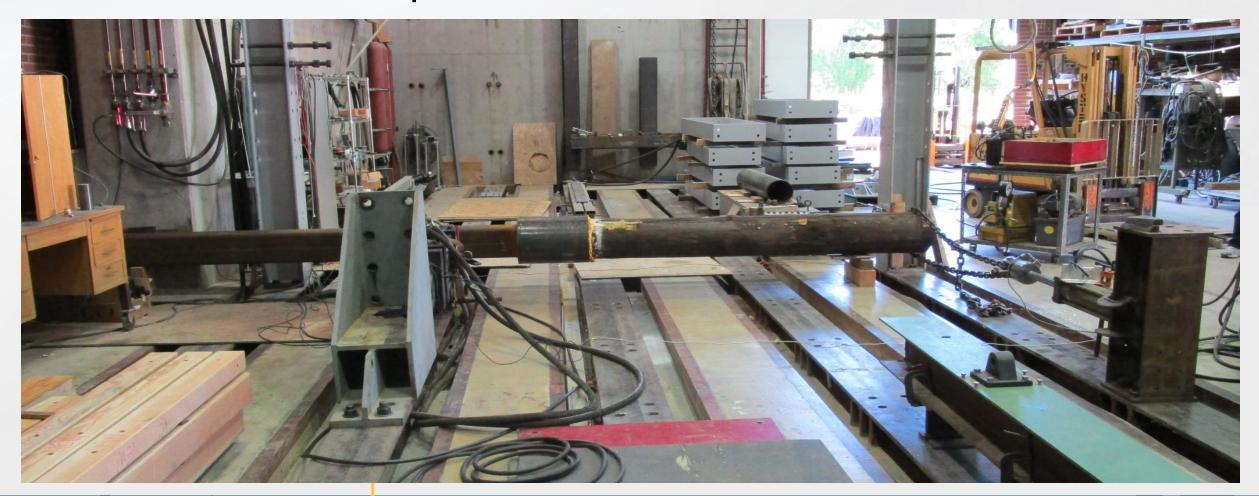

Lateral Test Setup

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Lateral Test Setup

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Typical Lateral Test Failure

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Bending Test Results

- All three failed at the base of the splice.
- Loading at failure was about what you'd expect for an unrepaired pile with 2" shell.
- Load remained about constant through 12" 24 " of deflection

Pile Repair Cost Data

- Pile Repair completed in 1 day.
 - Project takes 2 days with shoring and excavation.
- Typical plan set requires 3 sheets.
- \$10,000 dollars for PE
- \$20,000 for construction
- Cost per pile ~ \$30,000.

Timber Cap Repairs:

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Timber Cap Repair Options:

• Encapsulate with steel.

Remove and Replace

• Epoxy Injection?

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

• Cutting Pile Off to install splice.

08/05/2015

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

 Installing channel shims to connect steel cap to pile splice.

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Timber Cap Replacements

- Timber member usually replaced with Steel H Beam of similar size.
- Requires shoring the structure while old cap is removed and new cap is installed.

ATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Pile Clamps

- Use to jack and shore the superstructure during pile cap repairs.
- They have been in heavy use by ODOT bridge crews and Local Agency bridge crews.
- Crews had clamps fabricated to fit on square piles also.
- Bridge is typically left open to all traffic throughout the project.
- First used in 1980's?
- Video of replacement available on YouTube.

Replacing cap with pile clamps

Jacking from the Ground

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Epoxy Injection?

- Repair in place.
- Some caps don't function like beams but instead were used for construction and now act as a spacer between pile and girder.

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Lets try it...

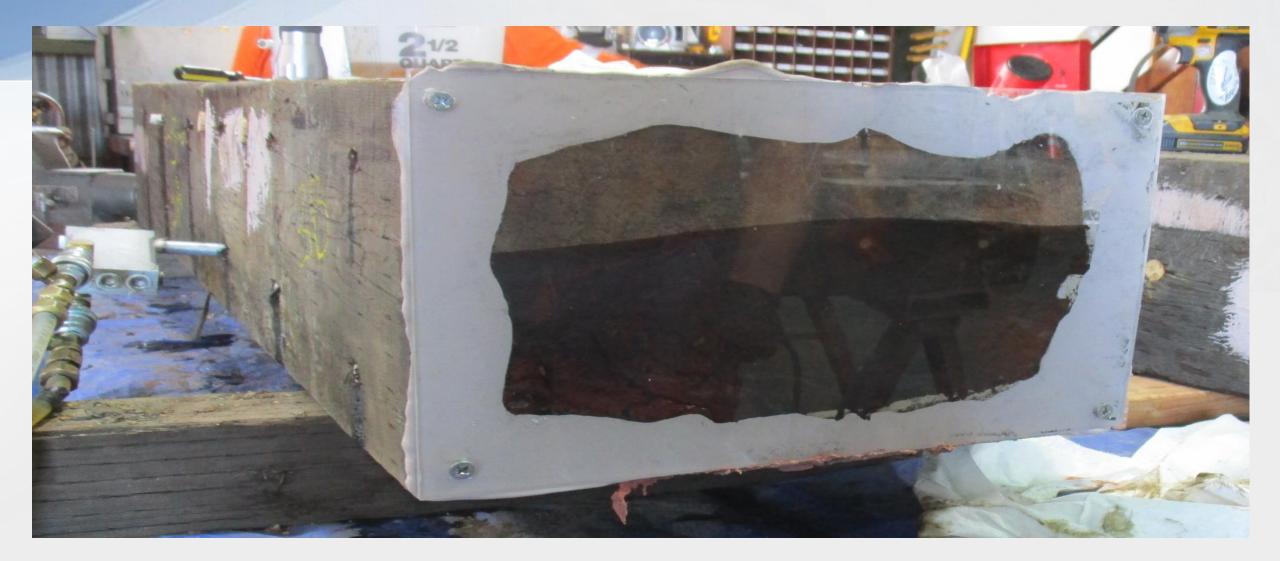

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

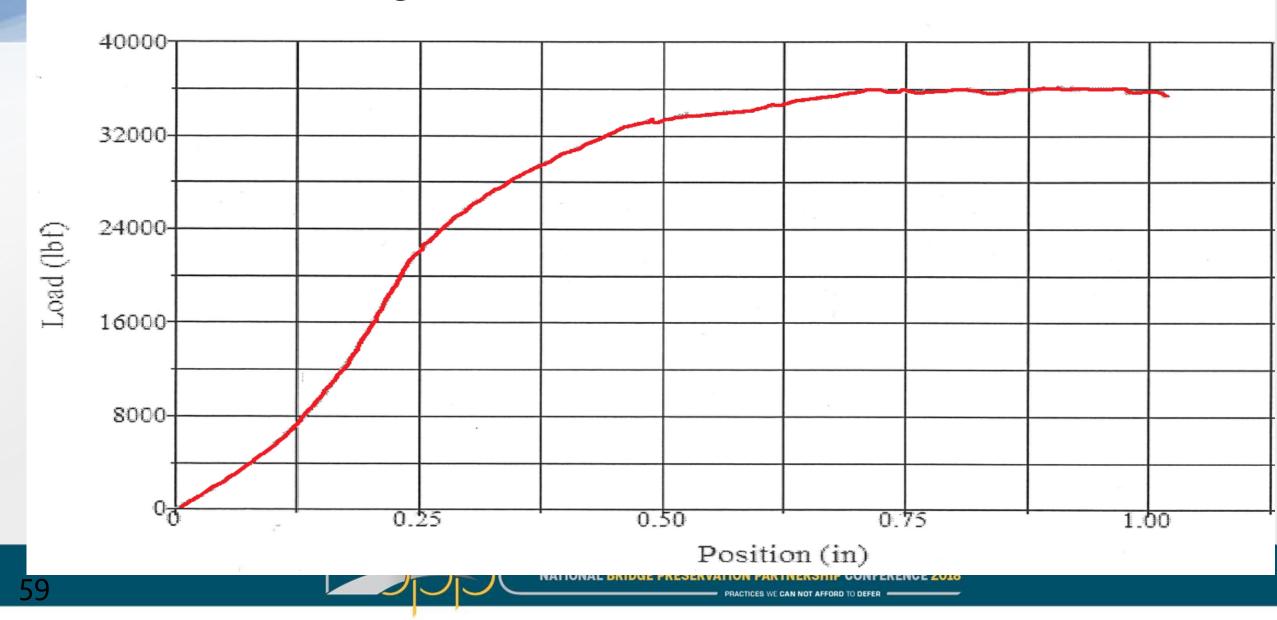

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

Destructive Testing Results

Cap Repair Summary:

- Encapsulation:
 - Useful when utilities or shoring constraints make full removal problematic.
 - \$50,000 \$80,000.
 - Connection to piles can be difficult.
 - Not feasible on abutments.
- Cap Replacement:
 - \$25,000 \$65,000
 - Shoring dominates design constraints and overall cost.
- Epoxy Injection:
 - Not recommended at this time as a viable cap repair.
