Route 37 EB & WB Bridges over Barnegat Bay Superstorm Sandy Emergency Repairs to Scour damaged Piers Township of Toms River, County of Ocean, New Jersey

### PRESENTED APRIL 2018

### BY RAMA KRISHNAGIRI, PE AND STEVE ESPOSITO, PE

OWNER: DESIGNER: New Jersey Department of Transportation WSP USA (FORMERLY PARSONS BRINCKERHOFF)

### Bridge Location & Status

Status: Mathis Bridge Rehabilitation currently under construction

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### Mathis Bridge

- Constructed in 1950
- Length = 4,877'
- Spans = 66
- Low-level Bridge
- Hammerhead Piers Founded on Untreated Timber Piles

ATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### **Tunney Bridge**

- Constructed in 1972
- Length = 4,878'
- Spans = 50
- High-level Fixed Bridge
- Hammerhead Piers or P/C bents Founded on Treated Timber Piles

ATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### **Rehabilitation details**

- Deck and Bearing Replacement
- Substructure Repairs
- Mechanical/Electrical Replacement and Upgrades
- Safety: Gates, Traffic Signals, Catwalks
- Underwater Inspection (August 2012)
  - Substructure inspection below the water level
  - Detailed Bay Bottom Surveyed in Easterly Portion
- No scoured areas were noted at the time of the inspection/survey

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### Geotechnical analysis

- Team's Familiarity with Project Site
- As-built Bridge Plans Included Subsurface Information

   Length of pier timber piles were estimated from as-built quantities
- Analysis Included:
  - Post-Sandy scoured condition Dec. 2012 inspection data used
  - Post-construction condition with scour repairs installed
    - Determined ultimate geotechnical axial capacity of single pile for critical pier
    - Analyzed pile group for pile cap deflection, axial load, shear, and bending
  - Critical Pier 11– fully undermined, 10' max. pile exposure, 15' scour

![](_page_15_Picture_9.jpeg)

### Structural analysis

- Analysis of Scoured Condition
- Analyses indicated that the scoured substructure and piles could support HS20 Live Load.
- Bridge could remain open, allowing critical transport of materials and emergency responders into the Barrier Island
- Analysis of Proposed Scour Repairs
- Assessed loading on timber piles from grout fill
  - Field Inspections Performed
  - Bearing inspection
  - Checked piers for plumbness
  - Deck Joint openings

![](_page_16_Picture_10.jpeg)

### **Emergency inspection**

### General view of south railing during emergency inspection

*No dips or kinks to indicate immediate damage incurred* 

![](_page_17_Picture_3.jpeg)

![](_page_17_Picture_4.jpeg)

IATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### Scour repair alternatives evaluated

- Rock Riprap Option Eliminated
  - HEC-23 considers riprap as temporary countermeasures at piers
- Initial Repair Options based on Emergency/Priority Letters
  - Steel sheeting around piers with grout pumped under pile caps
  - Timber sheeting around piers with grout pumped under pile caps

- Challenges
  - Limited vertical underclearance
  - Existing battered piles
  - Lateral clearance
  - Vibration

![](_page_18_Figure_11.jpeg)

![](_page_18_Picture_12.jpeg)

# Scour repair alternatives evaluated (continued)

- Additional Repair Options
  - Pre-grouted/sandbags placed under pile caps
  - Fabric formed bags installed insitu around pile caps filled with grout to form sides and grout pumped under pile caps
- Repair Options for Long-term, Resilient Scour Protection
  - Precast solid armoring around toe of Fabriform bags

- Challenges
  - Repetitious construction
  - Availability of materials
  - Standard construction equipment
  - Constructibility

![](_page_19_Picture_12.jpeg)

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### Grout pumping

Grout pumping from bridge – 1<sup>st</sup>: Fill Fabriform bags 2<sup>nd</sup>: Fill Scour holes beneath pile caps below water

![](_page_27_Picture_2.jpeg)

![](_page_27_Picture_3.jpeg)

ATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### A-jacks assembly / wrap

A nearby marina on Pelican Island served as Contractor's material staging area.

![](_page_28_Picture_2.jpeg)

### A-Jacks were assembled in 3'x5' bundles and wrapped in 2 layers of geotextile prior to installation.

![](_page_28_Picture_4.jpeg)

![](_page_28_Picture_5.jpeg)

### A-jacks delivery

# *Tug/barges were used to transport materials from staging area to the bridge.*

![](_page_29_Picture_2.jpeg)

![](_page_29_Picture_3.jpeg)

![](_page_29_Picture_4.jpeg)

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### A-jacks installation

### A-Jacks bundle were unloaded using spreader beams.

![](_page_30_Picture_2.jpeg)

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### a-jacks installation

# *After being lowered in the water, A-Jacks bundles were placed with diver assistance.*

![](_page_31_Picture_2.jpeg)

![](_page_31_Picture_3.jpeg)

![](_page_31_Picture_4.jpeg)

NATIONAL BRIDGE PRESERVATION PARTNERSHIP CONFERENCE 2018

### **Construction Challenges**

- Weather Fluctuations/Work Interruption
- Changes in Bay Bottom
- Larger uneven areas than anticipated in design
- Localized Leveling #57 Stone
- Periodic Siltation of Previous Work
- Installation of Geotextile Pre-installation
- Grout Mix Changes

### Conclusion

- Six year performance favorable
- Material deposition encouraged by repairs
- Multi-disciplinary Effort with Extensive Coordination
- Design Team & Client Coordination
  - Response Time
  - Hands-on Approach
- Fast Track Reviews/Approvals of Shop Submittals
- Very Favorable Response from Construction Team
