TSP₂

Regional Bridge Preservation Partnerships

- Regional partnerships have promoted a new level of trust and communication between Industry and DOT's.
- Industry has gained a greater understanding of critical preservation issues the DOT's are faced with.
- DOT open communication with Industry will promote partnering in developing effective new products as well as proper use of existing products resulting in cost effective solutions.
- "Repeated Exposure" to many different industry members at each partnership meeting helps facilitate these relationships.

Everyone Wins! Especially when we work together.
