

Pavement Technology, Inc.

Colin Durante, President

John Calvert, Technical Consultant

- PTI'S products are primarily “Top of The Curve” in nature.
- **Reclamite** Asphalt Rejuvenator
- **JOINTBOND** longitudinal joint stabilizer
- **SINAK** penetrating concrete sealer
- **CRF** cold applied crack sealant

- In addition, we have **Cyclogen** recycling agents for hot and cold in-place recycling, **SurfCrete** polymer based concrete resurfacer and **Coherex** and **Dustbond** dust suppressants.

- **PTI provides application services of our products in the Eastern and Southern United States and throughout the Country with our selected distributors.**

OUR LATEST DEVELOPMENTS

JOINTBOND Longitudinal Joint Stabilizer

JOINTBOND can be the lowest cost solution to premature deterioration in the area of a pavement that is vulnerable due to inadequate compaction.

SKIDABRADER / RECLAMITE

Surface texturing / binder rejuvenation

The combining of two field proven pavement preservation techniques restores surface texture while allowing the introduction of an asphalt binder altering rejuvenator with complete safety.

JOINTBOND Emulsion Being Applied To The Longitudinal Joints

Three years after application
of **JOINTBOND**

**New Construction Seal
With JOINTBOND**

JOINTBOND
After five weeks

Skidabrader Surface Texturing

Reclamite Rejuvenator Applied

A close-up photograph of asphalt pavement. The surface is dark grey and composed of numerous small, angular aggregate particles. The texture is highly irregular and porous. In the upper right quadrant, there is a distinct area where the asphalt appears darker and more saturated, indicating the absorption of a substance. The text 'Reclamite absorbed following texturing' is overlaid in yellow on this area.

**Reclamite absorbed following
texturing**
