# Corrosion Mitigation Systems for Existing Concrete Structures

Erik Thorp  
Vector Corrosion Technologies  
[www.vector-corrosion.com](http://www.vector-corrosion.com)

**Corrosion Ravaged Columns  
Chicago, Illinois**

# Corrosion Mitigation Solutions

---

- Galvanic Protection Systems
- Electrochemical Treatments
- Cable Impregnation

---

# Corrosion Basics

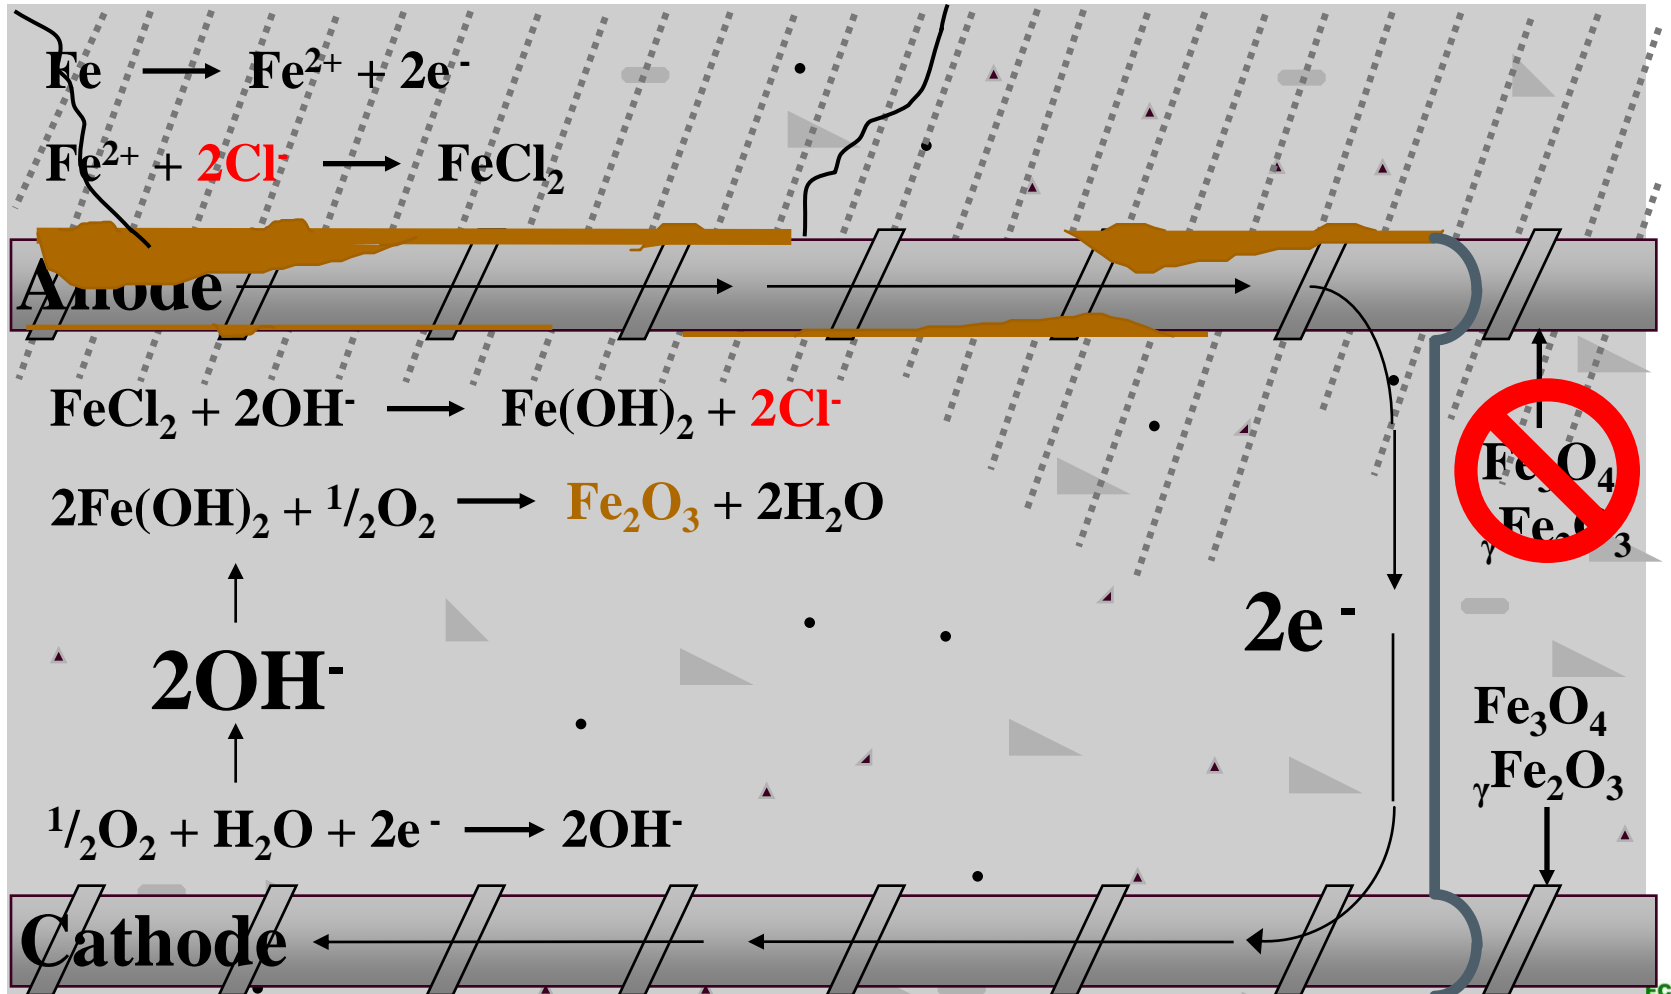

# Causes of Corrosion

---

- Chlorides
- Carbonation
- Dissimilar Metals

**Results in the Destruction of the  
Steel's Passive Oxide Layer**

# Corrosion Cell in Concrete

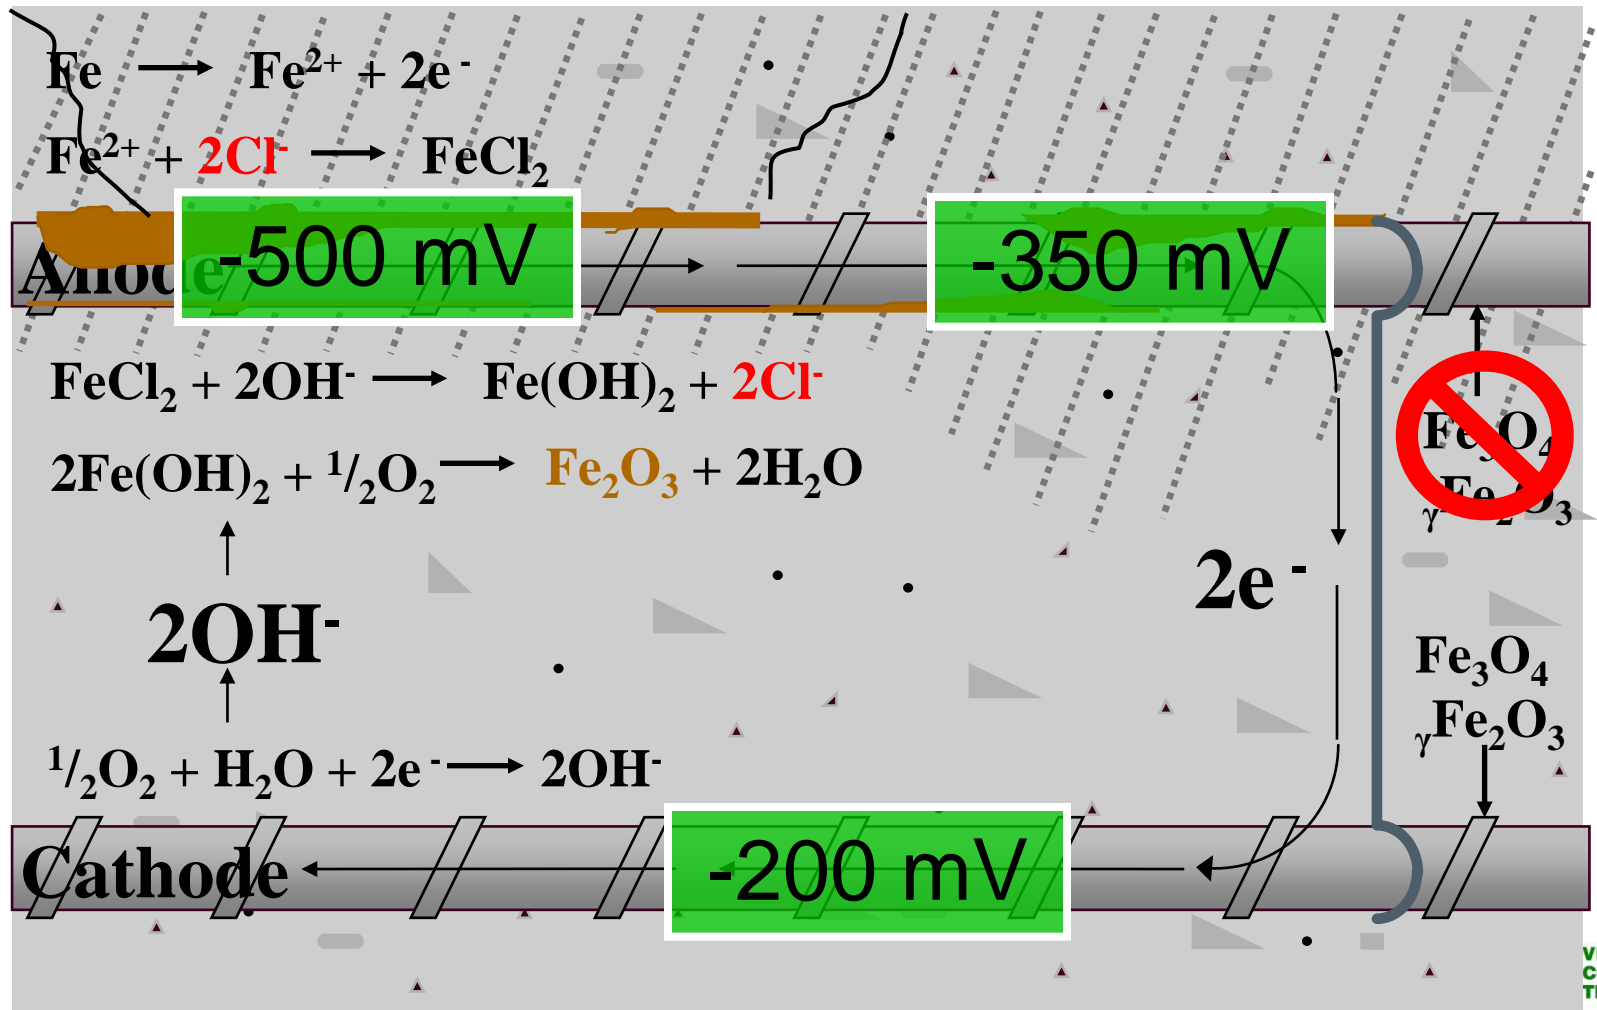

# Why Does This Occur?

---

Corrosion Potential for Steel in Concrete	
<u>Metal</u>	<u>Voltage</u>
Steel in Chloride-Free Concrete	0 to -200 mV
Steel in Chloride-Contaminated Concrete	-350 to -500 mV

\*Typical potentials measured with respect to copper-copper sulfate electrode

# Corrosion Cell in Concrete

**“Chip and Patch” Repair Method**

# Patch Accelerated Corrosion

# Halo Effect

---

---

# Galvanic Corrosion Protection Systems

# Galvanic Protection Systems

- Two different metals are connected in same electrolyte (concrete)
- More “active” metal = anode
- More “noble” metal = cathode
- Anode corrodes to protect cathode
- Natural reaction
  - no external power required
- Safe for prestressed concrete

# Potentials and Current Flow

Partial Galvanic Series	
<u>Metal</u>	<u>Voltage</u>
Zinc	-1100 mV
Steel in concrete	-200 mV to -500 mV

\*Typical potentials measured with respect to copper-copper sulfate electrode

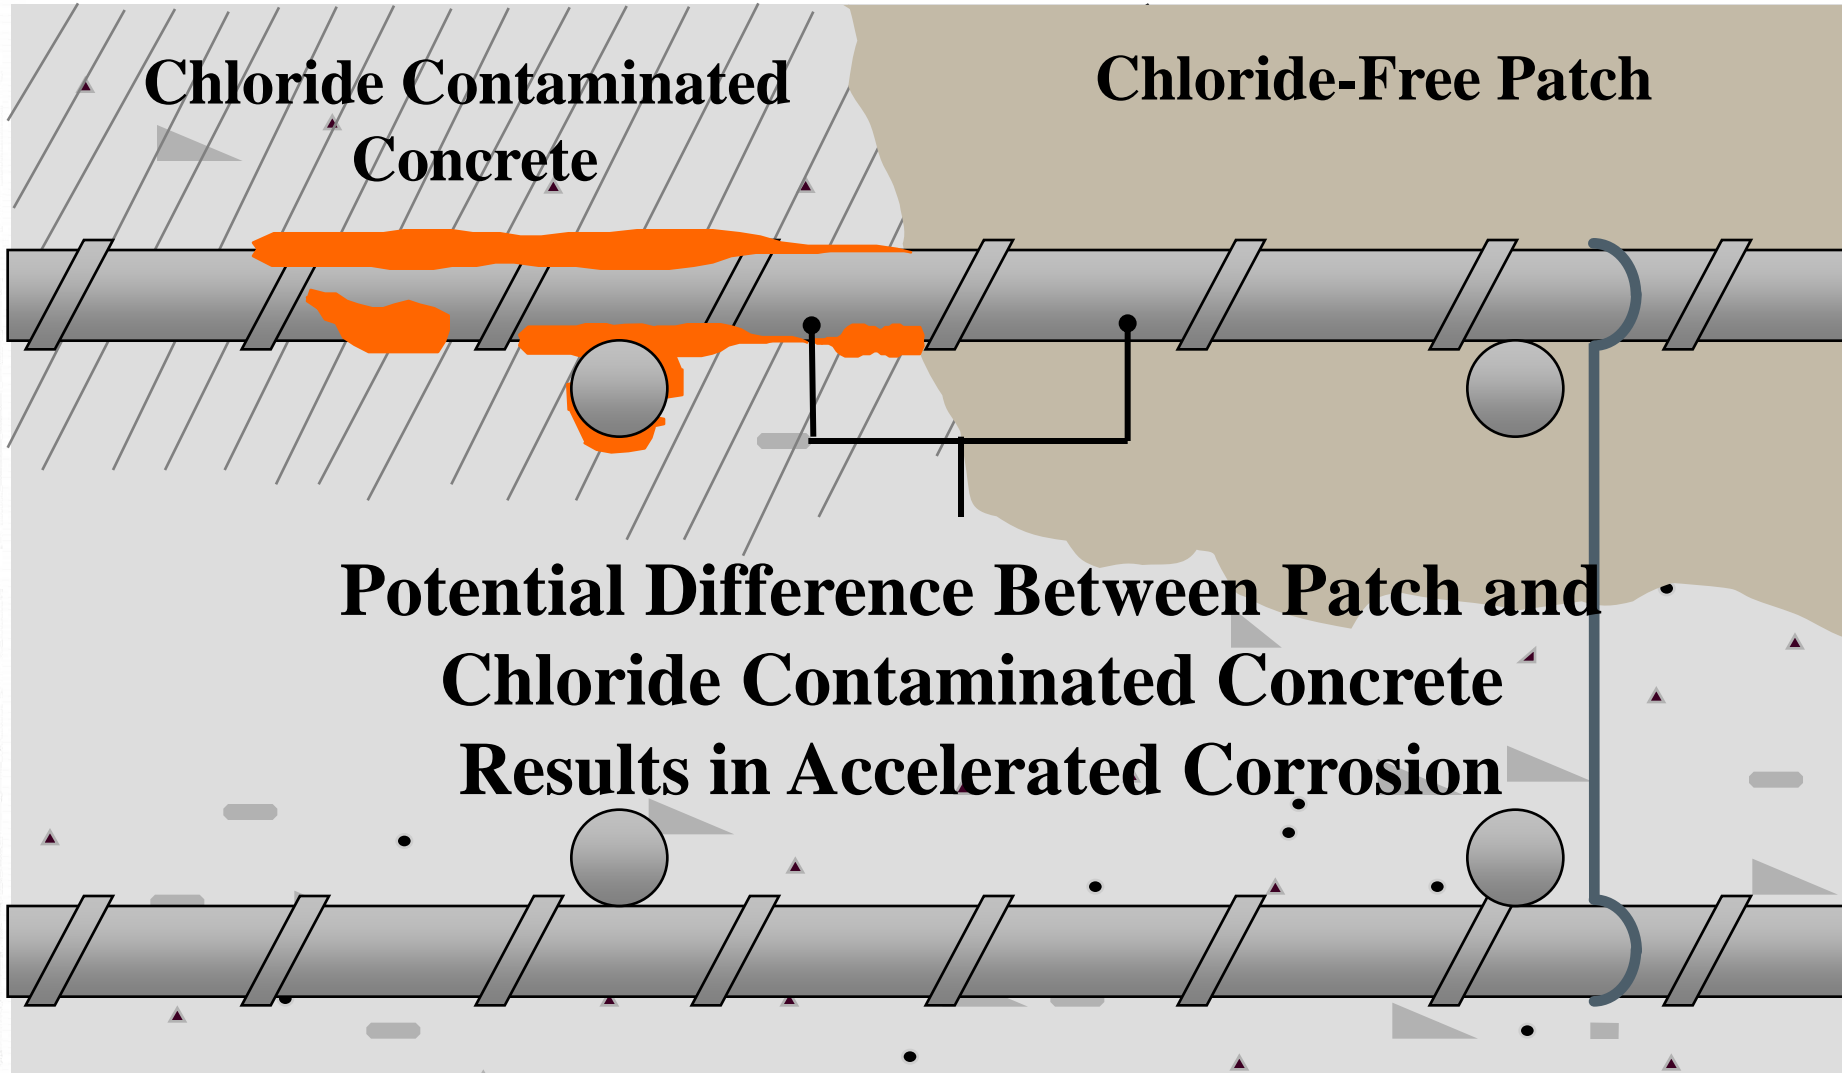

# Embedded Galvanic Anodes for Corrosion Prevention

Point Anodes  
vs.  
Distributed Anodes

# Point Anodes Protection

# Distributed Anodes Protection

# Distributed Galvanic Anodes

- Distributed anode units are pre-manufactured
  - Zinc around a steel core
  - Integral connections
- Anode size and spacing: based on steel-to-concrete surface area ratio and service life

# Applications

---

- Deck Overlays
- Abutment Encasements
- Column & Beam Encasements
- Interface Protection
- And more!

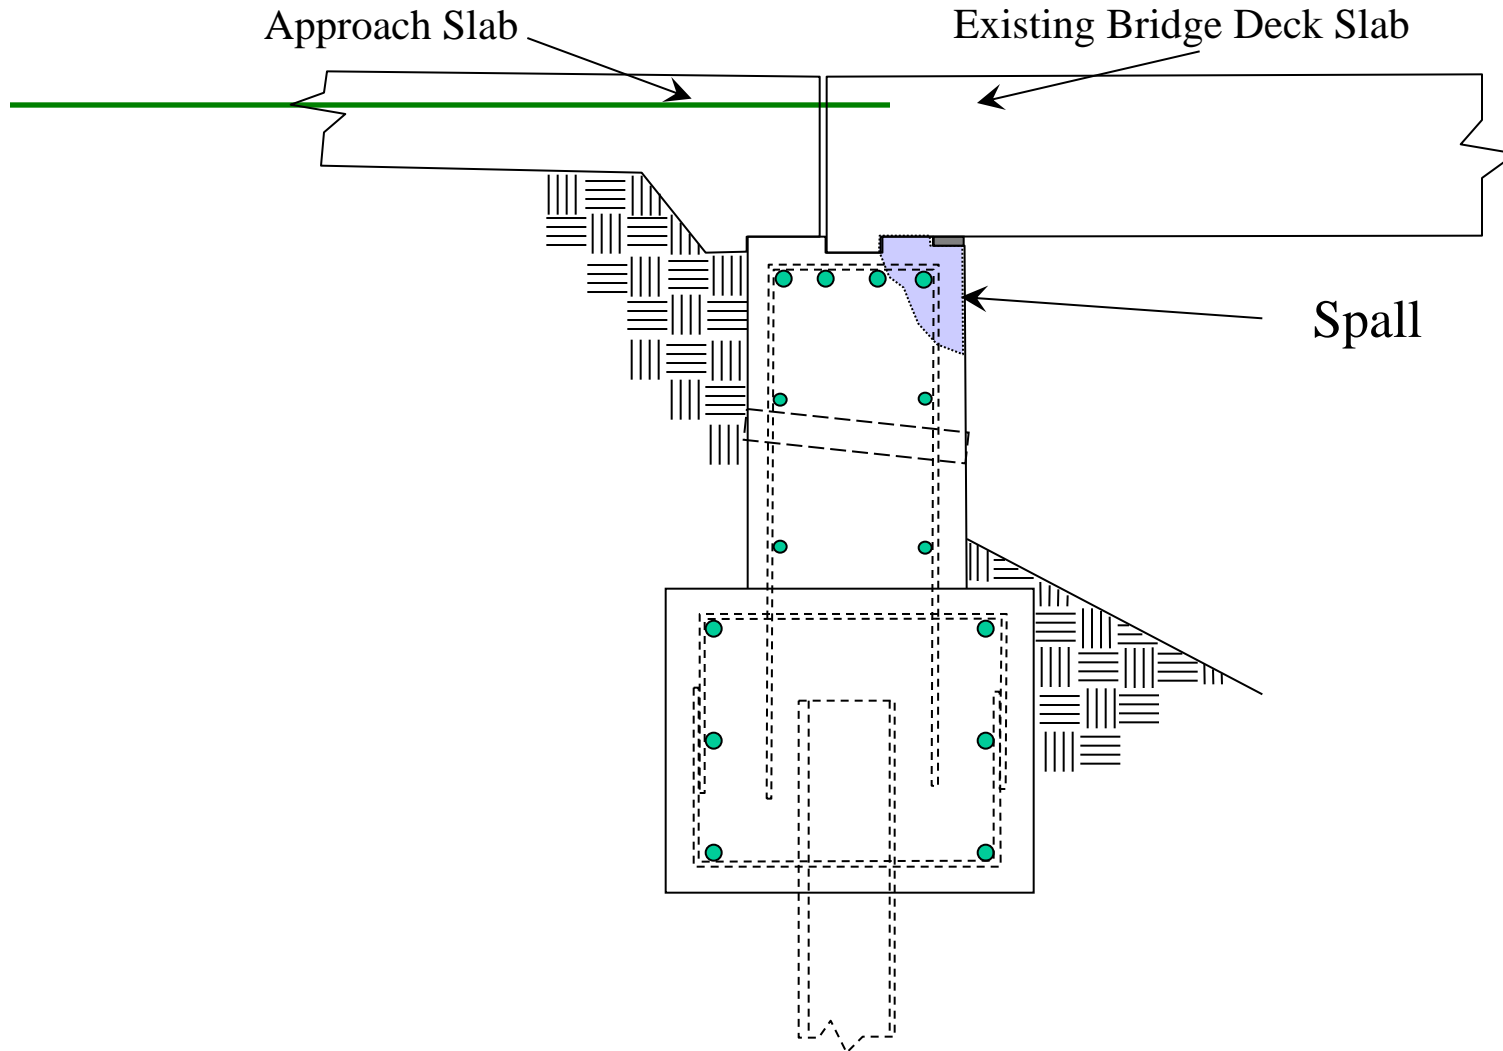

# On Many Slab Bridges...

---

- Slabs are in good condition
- Deterioration at abutment around the key way

# Typical Slab Bridge Abutment

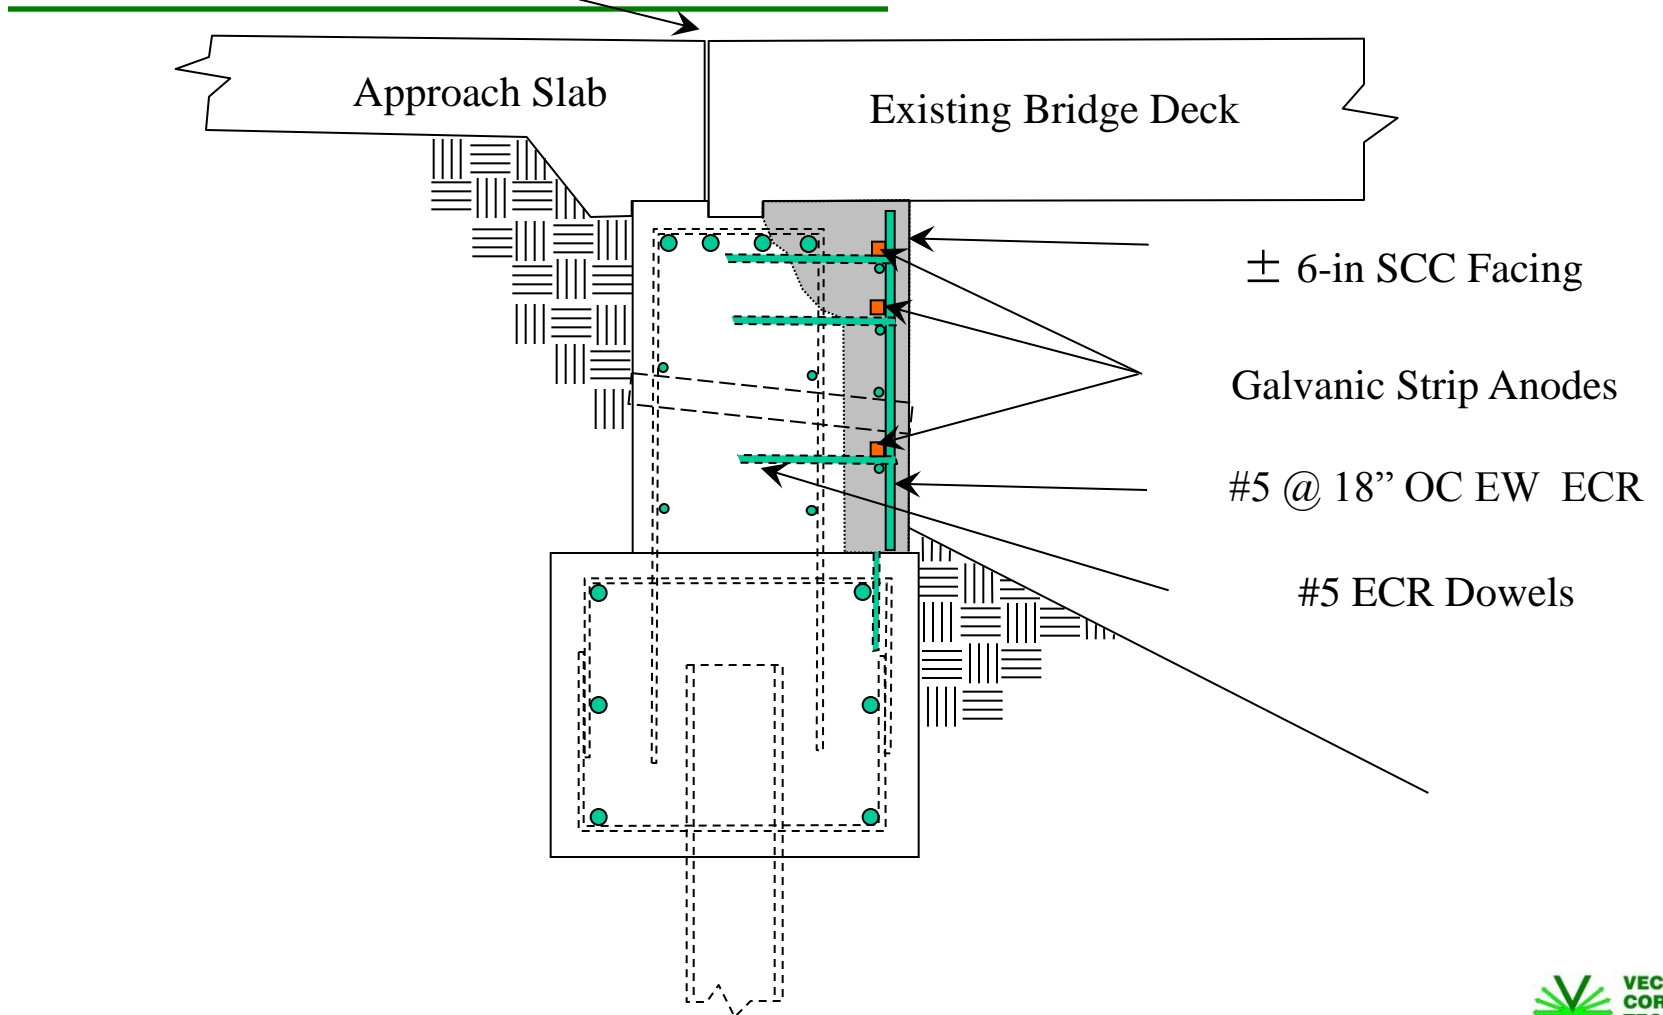

# Abutment Repair Detail With Galvanic Protection

# Questions

---

Do we have a few more minutes?

# Leister Bridge Cross Beam

---

- Completed in 1999
- Monitored for 10 years

# 10 Year Monitoring - Current

# Current Density

---

- Cathodic Prevention
  - European Standard EN 12696
  - Current Density 0.2-2mA/m<sup>2</sup>
  - No polarization criteria
- Leister Bridge
  - Ranged 0.6 mA/m<sup>2</sup> and 3.0 mA/m<sup>2</sup>
  - Overall mean of around 1.4 mA/m<sup>2</sup>

# Approximate Zinc Consumption

- Calculated based on current output and 85% utilization

# Forensic Analysis after 10 yrs
